# Wall-mounted boards winged

Our three and five surface boards are made with strong hinges for very intensive use. Each board can have several customised surfaces: such as different lines, chalkboard surfaces and/or whiteboard surfaces. We manufacture bespoke products just as quickly as standard products.

RC-10 three and five surface boards

Whiteboards with wings provide additional writing space. We use this RC-10 profile to produce whiteboards with three or with five writing surfaces. The profile is anodised aluminium with grey corner pieces. Includes 30 cm pen tray

School boards
Softline 19 mm

Winged school boards are made for very intensive use. Components such as hinges are extra strong, for example. Thanks to the extra flat aluminium profile, the school boards can be made with a lightweight core. They can therefore also be mounted on height-adjustable structures (columns).

Projection boards
ExtraFlat

Winged projection boards are lightweight, allowing them to be mounted on columns (see from page 98).

These boards can have recesses in them for touch sensor modules. The wings can then still be folded away completely. The grey strip on the board is the area where the module can be installed.

Wall-mounted boards height-adjustable

The height-adjustable writing boards can easily be changed or moved. Each suspension system has its own benefits and attributes, but they all provide flexibility of use.

Winged columns

Our column boards are made of extremely solid materials,
which makes them suitable for long-term intensive use.
Furthermore, thanks to the counterweight construction,
the height can easily be adjusted.

Winged
sliding mechanism

Winged boards with a concealed sliding mechanism can be adjusted in height by 50 cm. When viewed from the front, the set-up looks exactly the same as a fixed, wall-mounted board.
